- Ensure the technical feasibility of UI/UX designs

Software Engineer | Agryd | Jaipur, IN**April 2014 – Dec 2014**

- Develop and maintain web applications.
- Collaborate with designers and back-end developers to create and implement user-friendly interfaces
- Ensure the technical feasibility of UI/UX designs

Software Engineer | Doomshell | Jaipur, IN**April 2013 – March 2014**

- Develop and maintain web applications.
- Collaborate with designers and back-end developers to create and implement user-friendly interfaces
- Ensure the technical feasibility of UI/UX designs

PROJECTS

Project Name: HAEA Kia Portal**Duration:** 6 Months**Languages:** Nodejs, React.js 18**Project Summary:** A dealer portal application.

- The application is a dealer portal that allows authorized dealers to register vehicles using their VIN.

- Offers a package-based subscription service for vehicle-related features and services.

Project Name: Miovision

Duration: 10 Months

Languages: Java, Angular 16, Tailwind CSS

Project Summary: An application for traffic data analysis.

- Designed to collect and analyze traffic data.
- Features a map interface displaying devices and intersections.
- Capability to generate comprehensive reports based on collected data.

Project Name: XOT Local

Duration: 6 Month

Languages: Nodejs, React.js 18

Project Summary: An application managing after sales data.

- Developed a robust system to manage and visualize after-sales data for vehicles and parts, enabling data-driven insights into performance, customer service, and inventory trends.

Project Name: VBOP

Duration: 1 Year

Languages: Java, Spring Boot, Angular 14, PrimeNg

Project Summary: An application for automobile parts pricing management.

- Engineered a dynamic pricing management system for automotive parts, enabling real-time price adjustments based on market fluctuations, competitor analysis, and inflation trends.

Project Name: MSS4.0

Duration: 1.8 Year

Languages: Java, Spring Boot, Angular 12, PrimeNg

Project Summary: An application for claim registration and reporting.

- Designed and implemented a streamlined system to handle the registration of new claims, customer programs, and service inquiries, enhancing operational efficiency and user experience.
- Generates reports related to sales, claims, and inquiries.

Project Name: RBA

Duration: 1.4 Year

Languages: Nodejs, Angular 12, Angular Material

Project Summary: An application for financial data visualization.

- Built a comprehensive financial data platform to visualize key metrics, automate report generation, and execute complex calculations for informed decision-making.
- Enables users to visualize trends on a year-over-year or monthly basis.
- Capability to generate comprehensive reports based on collected data

EDUCATION

B.Tech. (Stani Memorial College of Eng. & Tech. Jaipur)
